REDBELLY

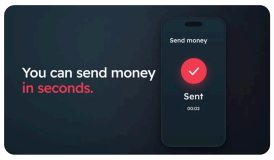

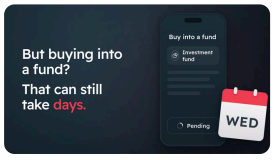

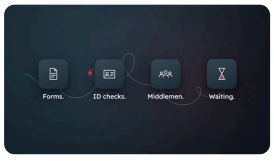

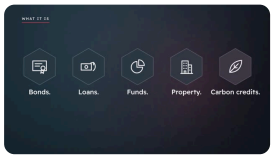

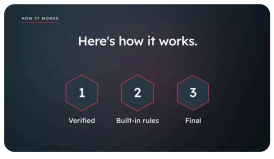

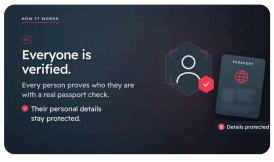

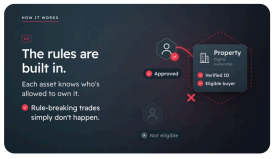

Redbelly, made simple

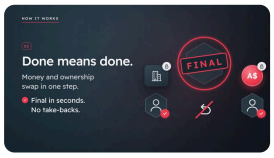

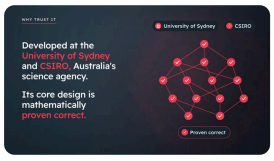

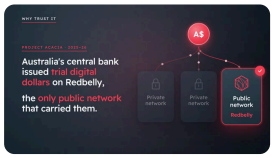

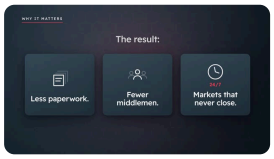

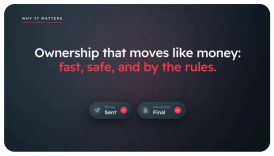

What Redbelly does and why it matters, in everyday language. An animated explainer for people outside crypto, told in everyday words with no jargon.

Format	Video. Landscape 1920 x 1080 and vertical 1080 x 1920 versions of the same cut
Length	85 seconds (limit 90)
Files	MP4, H.264 and AAC, 30 fps
Subtitles	Burned into the picture, plus separate SRT and WebVTT files
Sound	Original music and effects, synthesised for this film. Nothing to license
Sources	16 public sources: Redbelly, Tokeniser and the RBA's Project Acacia report

Script and storyboard

TIME FRAME		ON SCREEN	WHAT YOU SEE
0:00		You can send money in seconds.	A phone sends money to Mum. A paper plane flies off and a red tick lands: Sent, 00:02.
0:02		But buying into a fund? That can still take days.	The same phone tries to buy into a fund. The button turns into Pending while a desk calendar flips from Monday to Wednesday.
0:06		Forms. ID checks. Middlemen. Waiting.	Four tiles slam in on the beat: a form, an ID card, a row of people and an hourglass. A deal crawls along a tangled path between them.
0:10		Redbelly is built to change that.	The tangled path pulls tight into one red line, folds into the hexagon of the Redbelly isotype, and the official logo resolves with a light ripple.
0:13		A public network, built in Australia, where real-world assets go digital.	A honeycomb network grows around the Redbelly isotype, with a bond, a loan, a fund, a building and a leaf in the cells around it.
0:20		Bonds. Loans. Funds. Property. Carbon credits.	The five asset hexagons glide into a row and each is named on the beat.
0:23		Ownership becomes digital, with the rules written right in.	A paper ownership certificate is scanned into a glowing digital card, and three rule chips slide out of it.
0:27		Here's how it works.	Three numbered hexagons: Verified, Built-in rules, Final. The camera dives into the first.
0:30		01 Everyone is verified. Every person proves who they are with a real passport check. Their personal details stay protected.	A person in a hexagon gets a face check against a passport; a red verified badge pops on and the passport details blur behind a lock.
0:37		02 The rules are built in. Each asset knows who's allowed to own it. Rule-breaking trades simply don't happen.	A property card carries its own rules. A verified buyer passes and is approved; an unverified buyer bounces off the boundary.

0:45		03 Done means done. Money and ownership swap in one step. Final in seconds. No take-backs.	Money and a property card swap places in one move, lock, and a ring closes into a FINAL stamp. An undo arrow is struck out.
0:52		Developed at the University of Sydney and CSIRO, Australia's science agency. Its core design is mathematically proven correct.	A graph of states lights up, every node ticked in turn, ending on a Proven correct seal. University of Sydney and CSIRO chips sit above.
1:00		Project Acacia · 2025–26 Australia's central bank issued trial digital dollars on Redbelly, the only public network that carried them.	An A$ coin from the central bank streams into three networks: two private, one public, Redbelly, which lights up.
1:07		The result: Less paperwork. Fewer middlemen. Markets that never close.	Three cards: a paper stack that thins out, middlemen who fade away, and a clock that never stops (24/7).
1:12		Ownership that moves like money: fast, safe, and by the rules.	The opening line comes back: Money, Sent and Ownership, Final, side by side.
1:17		Verified people. Built-in rules. Final in seconds. redbelly.network	The official Redbelly logo with the three ideas underneath and the web address.

All read on 27 October 2026. Every fact in the film traces to at least one of these pages.

#	SOURCE	FACTS IT SUPPORTS
1	**Redbelly Network: home page** Redbelly Network https://redbelly.network	Redbelly is built to issue, manage and trade assets digitally, with compliance built in. On Redbelly, real-world assets are issued, managed and traded in digital form. These assets include bonds, loans, funds, property and carbon credits.
2	**Asset Tokenisation** Redbelly Network https://redbelly.network/asset-tokenisation	Today that involves paperwork, repeated ID checks, middlemen and waiting. Redbelly is built to issue, manage and trade assets digitally, with compliance built in. Ownership is recorded digitally, with the asset's rules programmed in. Each asset sets who is allowed to hold it, and this is enforced at the point of trade. Trades that break the rules do not go through. Transactions are final within seconds and cannot be reversed. Less paperwork and fewer middlemen. Markets that never close.
3	**Redbelly Project Acacia** Redbelly Network https://redbelly.network/projectacacia	Personal details stay protected. Redbelly was developed at the University of Sydney and CSIRO, Australia's national science agency.
4	**About Us: Redbelly Journey timeline** Redbelly Network https://redbelly.network/about-us	Its core design, the way the network agrees on every transaction, is mathematically proven correct. In Project Acacia, Australia's central bank issued trial digital dollars (pilot wholesale CBDC) on Redbelly.
5	**Ecosystem: CSIRO entry** Redbelly Network https://redbelly.network/ecosystem	Redbelly was developed at the University of Sydney and CSIRO, Australia's national science agency.
6	**Tokenised asset-backed security transaction pilot launches under Project Acacia (11 December 2025)** Redbelly Network https://redbelly.network/blog/tokenised-asset-backed-security-transaction-pilot-launches-under-Project-Acacia	Redbelly was built in Australia. Money and ownership change hands in a single step.
7	**Identity and participation on the network** Redbelly Network developer portal (Vine) https://vine.redbelly.network/identity/	Everyone taking part must prove who they are before they can act on the network.

8	**Accessing Redbelly Network** Redbelly Network developer portal (Vine) https://vine.redbelly.network/identity/user-access/	People prove their identity with a passport, checked with biometrics.
9	**Eligibility on Redbelly** Redbelly Network developer portal (Vine) https://vine.redbelly.network/identity/eligibility/	Personal details stay protected. Each asset sets who is allowed to hold it, and this is enforced at the point of trade.
10	**DBFT and super block: security, finality and scalability** Redbelly Network developer portal (Vine) https://vine.redbelly.network/consensus/	Transactions are final within seconds and cannot be reversed. Its core design, the way the network agrees on every transaction, is mathematically proven correct.
11	**Tokeniser: home page and FAQ** Tokeniser (a Redbelly Network project) https://tokeniser.com	Redbelly was built in Australia. Ownership is recorded digitally, with the asset's rules programmed in.
12	**Our Technology** Tokeniser (a Redbelly Network project) https://tokeniser.com/technology	Redbelly is a public network. Transactions are final within seconds and cannot be reversed. Redbelly was developed at the University of Sydney and CSIRO, Australia's national science agency. Its core design, the way the network agrees on every transaction, is mathematically proven correct. In Project Acacia, Australia's central bank issued trial digital dollars (pilot wholesale CBDC) on Redbelly.
13	**Instant Settlement** Tokeniser (a Redbelly Network project) https://tokeniser.com/product/superpowers/instant-settlement	Buying into a fund can still take days to settle. Today that involves paperwork, repeated ID checks, middlemen and waiting. Money and ownership change hands in a single step.
14	**Automated Compliance** Tokeniser (a Redbelly Network project) https://tokeniser.com/product/superpowers/automated-compliance	Today that involves paperwork, repeated ID checks, middlemen and waiting. Trades that break the rules do not go through.
15	**Always-On** Tokeniser (a Redbelly Network project) https://tokeniser.com/product/superpowers/always-on	Markets that never close.

16 **Project Acacia: Exploring the role of digital money in wholesale tokenised asset markets. Final Report (May 2026)**
Reserve Bank of Australia and Digital Finance Cooperative Research Centre
https://www.rba.gov.au/payments-and-infrastructure/central-bank-digital-currency/pdf/project-acacia-final-report.pdf

Redbelly is a public network.
These assets include bonds, loans, funds, property and carbon credits.
Money and ownership change hands in a single step.
In Project Acacia, Australia's central bank issued trial digital dollars (pilot wholesale CBDC) on Redbelly.
Of the three networks that carried the trial digital dollars, Redbelly was the only public one.
Project Acacia's experiments ran in 2025 and 2026, and its pilots used real money.

Fact check

Each line of the film, the claim it makes and the exact supporting sentences. [...] marks words left out of a quote.

0:02 But buying into a fund? That can still take days.

Buying into a fund can still take days to settle.

> "Every subscription, redemption and transfer remains unsettled for two business days in listed funds, and often longer in private assets." [13]

0:06 Forms. ID checks. Middlemen. Waiting.

Today that involves paperwork, repeated ID checks, middlemen and waiting.

> "Investor eligibility, holder limits and transfer restrictions are typically managed through spreadsheets, emails and manual sign-offs." [14]

> "Reusable client identity and KYC credentials streamline onboarding and reduce duplication" [2]

> "Lower intermediaries and automate issuance, settlement and compliance" [2]

> "Every subscription, redemption and transfer remains unsettled for two business days in listed funds, and often longer in private assets." [13]

0:10 Redbelly is built to change that.

Redbelly is built to issue, manage and trade assets digitally, with compliance built in.

> "Redbelly provides the infrastructure to issue, manage, and distribute regulated digital financial assets to a global investor base." [1]

> "Asset issuers can issue and distribute products globally, with compliance built into the infrastructure" [2]

0:13 A public network, built in Australia, where real-world assets go digital.

Redbelly is a public network.

> "Redbelly is a public network" [12]

> "including Canvas Connect (private), Ethereum (public), Hedera (both public and private instances), Redbelly Network (public) and XRP Ledger (public)" [16]

Redbelly was built in Australia.

> "Redbelly is an Australian-developed, high-performance" [6]

> "Tokeniser operates on Redbelly Network, Australia's public digital token infrastructure, with identity and eligibility built into the protocol." [11]

On Redbelly, real-world assets are issued, managed and traded in digital form.

> "Redbelly provides the infrastructure to issue, manage, and distribute regulated digital financial assets to a global investor base." [1]

0:20 Bonds. Loans. Funds. Property. Carbon credits.

These assets include bonds, loans, funds, property and carbon credits.

> "TREASURIES & BONDS" [1]

> "PRIVATE CREDIT" [1]

> "CARBON CREDITS" [1]

> "REAL ESTATE" [1]

> "issuance, trading and redemption of tokenised units in a wholesale managed investment scheme, with registration and distribution handled through the Tokeniser platform." [16]

> "network used in use cases: Redbelly Network." [16]

> "a tokenised structured finance security backed by loans" [16]

0:23 Ownership becomes digital, with the rules written right in.

Ownership is recorded digitally, with the asset's rules programmed in.

> "Tokenisation records ownership of financial products and services as digital tokens, and lets you program the rules of the asset." [11]

> "Asset issuers can issue and distribute products globally, with compliance built into the infrastructure" [2]

0:30 01 Everyone is verified. Every person proves who they are with a real passport check. Their personal details stay protected.

Everyone taking part must prove who they are before they can act on the network.

> "all network participants MUST prove they are who they say they are before gaining access" [7]

People prove their identity with a passport, checked with biometrics.

> "prove they possess a valid photo identity document (passport) which is verified via biometric checks" [8]

Personal details stay protected.

> "Participants verify their identities, but their privacy remains protected through zero-knowledge proofs." [3]

> "minimises their data exposure" [9]

0:37 02 The rules are built in. Each asset knows who's allowed to own it. Rule-breaking trades simply don't happen.

Each asset sets who is allowed to hold it, and this is enforced at the point of trade.

> "defined investor eligibility, enforced at the point of trade" [2]

> "only users that can prove they meet the criteria can interact with a smart contract's functions" [9]

Trades that break the rules do not go through.

> "Trades that fail a check do not proceed" [14]

> "defined investor eligibility, enforced at the point of trade" [2]

0:45 03 Done means done. Money and ownership swap in one step. Final in seconds. No take-backs.

Money and ownership change hands in a single step.

> "Its deterministic consensus unifies payments and asset ledgers into a single system" [6]

> "cash and units are exchanged in a single step" [13]

> "Both the tokenised bond and the wCBDC were issued on to the same network." [16]

Transactions are final within seconds and cannot be reversed.

> "transactions can be deterministically finalised in a matter of seconds" [10]

> "Deterministic finality ensures transactions are confirmed once and cannot be reversed" [2]

> "Deterministic finality settles a transaction in a single round, final the moment it completes." [12]

0:52 Developed at the University of Sydney and CSIRO, Australia's science agency. Its core design is mathematically proven correct.

Redbelly was developed at the University of Sydney and CSIRO, Australia's national science agency.

> "Developed at the University of Sydney and CSIRO" [3]

> "developed from research at the University of Sydney and CSIRO, Australia's government science agency" [12]

> "Australia's national science agency" [5]

Its core design, the way the network agrees on every transaction, is mathematically proven correct.

> "DBFT has been formally verified meaning that a rigorous mathematical proof has been performed to demonstrate the algorithm's correctness" [10]

> "Redbelly's consensus is proven correct by model checking" [12]

> "Formal Verification of the DBFT Consensus Protocol" [4]

1:00 Project Acacia · 2025–26 Australia's central bank issued trial digital dollars on Redbelly, the only public network that carried them.

In Project Acacia, Australia's central bank issued trial digital dollars (pilot wholesale CBDC) on Redbelly.

> "Use cases used three of the short-listed" [16]

> "platforms for their experimentation with pilot wCBDC: Australian Payments Plus's (AP+) HashSphere instance (a private Hedera-based ledger), Canvas Connect" [16]

> "and Redbelly Network (a public-permissioned" [16]

> "represented a real legal claim on the RBA" [16]

> "Australian Bond Exchange piloted secondary market transactions involving the purchase of a tokenised corporate bond digital twin using wCBDC as the settlement asset." [16]

> "network used in use case: Redbelly Network." [16]

> "It has settled a tokenised corporate bond in the Reserve Bank of Australia's pilot wholesale CBDC as part of Project Acacia." [12]

> "Selected to participate in RBA Project Acacia" [4]

Of the three networks that carried the trial digital dollars, Redbelly was the only public one.

> "Use cases used three of the short-listed" [16]

> "platforms for their experimentation with pilot wCBDC: Australian Payments Plus's (AP+) HashSphere instance (a private Hedera-based ledger), Canvas Connect" [16]

> "and Redbelly Network (a public-permissioned" [16]

> "including Canvas Connect (private), Ethereum (public), Hedera (both public and private instances), Redbelly Network (public) and XRP Ledger (public)" [16]

Project Acacia's experiments ran in 2025 and 2026, and its pilots used real money.

> "completed experimentation between August 2025 and February 2026" [16]

> "12 pilot use cases, which involved real money and real asset transactions" [16]

1:07 The result: Less paperwork. Fewer middlemen. Markets that never close.

Less paperwork and fewer middlemen.

> "Lower intermediaries and automate issuance, settlement and compliance" [2]

Markets that never close.

> "Access a larger investor base unlocked by borderless 24/7 markets" [2]

> "Your fund operates without market hours or cut-offs." [15]

1:12 Ownership that moves like money: fast, safe, and by the rules.

Transactions are final within seconds and cannot be reversed.

> "transactions can be deterministically finalised in a matter of seconds" [10]

> "Deterministic finality ensures transactions are confirmed once and cannot be reversed" [2]

> "Deterministic finality settles a transaction in a single round, final the moment it completes." [12]

Everyone taking part must prove who they are before they can act on the network.

> "all network participants MUST prove they are who they say they are before gaining access" [7]

Each asset sets who is allowed to hold it, and this is enforced at the point of trade.

> "defined investor eligibility, enforced at the point of trade" [2]

> "only users that can prove they meet the criteria can interact with a smart contract's functions" [9]

1:17 Verified people. Built-in rules. Final in seconds. redbelly.network

Everyone taking part must prove who they are before they can act on the network.

> "all network participants MUST prove they are who they say they are before gaining access" [7]

Each asset sets who is allowed to hold it, and this is enforced at the point of trade.

> "defined investor eligibility, enforced at the point of trade" [2]

> "only users that can prove they meet the criteria can interact with a smart contract's functions" [9]

Transactions are final within seconds and cannot be reversed.

> "transactions can be deterministically finalised in a matter of seconds" [10]

> "Deterministic finality ensures transactions are confirmed once and cannot be reversed" [2]

> "Deterministic finality settles a transaction in a single round, final the moment it completes." [12]

Verification

52 of 52 automated checks pass. They are re-run with `npm run verify`.

Script

CHECK	RESULT	DETAIL
Running time is 90 seconds or less	PASS	85.00 s
Scenes run back to back from 0 s to the end	PASS	16 scenes

Wording

CHECK	RESULT	DETAIL
Composition loads without errors (16x9)	PASS	no page errors
On-screen text sampled for the whole film (16x9)	PASS	341 samples, 4 per second
Composition loads without errors (9x16)	PASS	no page errors
On-screen text sampled for the whole film (9x16)	PASS	341 samples, 4 per second
The banned word and the two stand-ins the brief names never appear in the entry	PASS	164 script strings, 189 distinct on-screen strings and both subtitle files scanned
No other stand-ins or jargon (ledger, chain, crypto, token, node, consensus and more)	PASS	13 jargon patterns, none found
No file in the repository contains the three banned terms	PASS	all text files scanned

Facts

CHECK	RESULT	DETAIL
Every scene that states a fact cites at least one claim	PASS	14 scenes
Every claim a scene cites exists	PASS	22 distinct claims cited
Every claim is backed by a verbatim quote from a listed source	PASS	22 claims, 58 quotes
Every source has a publisher, title, https link and quotes	PASS	16 sources
Every listed source is used by at least one claim	PASS	all sources used
Facts come only from public Redbelly material and the RBA report	PASS	redbelly.network, vine.redbelly.network, tokeniser.com, www.rba.gov.au

Captions

CHECK	RESULT	DETAIL
SRT and VTT files exist	PASS	submission/redbelly-made-simple.en.srt and .en.vtt

Subtitle files are up to date with the script	PASS	regenerate with npm run captions
SRT cues are numbered 1..n in order	PASS	29 cues
SRT and VTT carry the same cues	PASS	29 cues
Cues never overlap and stay inside the film	PASS	last cue ends 84.80 s
At most two lines per cue and 42 characters per line	PASS	longest line 41 characters
Reading speed is 20 characters per second or less	PASS	fastest 19.7 cps
Every cue stays up for at least 1 second	PASS	shortest 1.35 s
Every cue's words are burned into the picture while it shows (16x9)	PASS	29 cues matched against the on-screen text
Every cue's words are burned into the picture while it shows (9x16)	PASS	29 cues matched against the on-screen text
